About

A **product engineer** who has built scalable systems in FinTech and EdTech, in both corporate and startup teams. I care about why a feature matters to users and to the business, and also about how cleanly it's built.

Briefly

- 7 years (`TypeScript`, `React`, `Elixir`, `Node`, `GraphQL`, `PostgreSQL`, `SQL`, `AWS`, `Docker`)
- Full ownership of features end-to-end
- Mentor engineers, and hackathon finalist
- Worked on a couple of government projects, but I'm not a Russian spy

Experience

Feb 2024 - Present

Cadmus — an assessment platform used by universities in Australia, New Zealand and the UK. (full-time, Melbourne, then remote from the UK)
Lead Engineer, Nov 2025 - Present. Senior Software Engineer, Feb 2024 - Nov 2025.

- **Oral assessments.** Built browser video capture and playback from scratch, carrying about **5,000 video responses a month** from launch. Around 30% of early recordings failed. I took that to roughly **99% success.**
- **AI-powered assessments.** Drove bringing AI into oral assessments, and built the system behind it across the Elixir pipeline and the React interface.
- Built QTI import to cut onboarding time for new universities. Shipped marking and moderation flows to close a gap with competitors. Added multiformat assessments to improve retention.

`TypeScript`, `Elixir`, `React`, `GraphQL`, `PostgreSQL`, `AWS`, `Datadog`, `Sentry`.
https://cadmus.io/

Mar 2023 - Jan 2024

Fullstack Developer and Mentor at Elbrus Coding Bootcamp. (full-time, St Petersburg) Taught end-to-end web development, gave the lectures, and reviewed students' code. Built the tools that automated parts of the training, and wrote the assessments students were marked on. `TypeScript`, `React`, `Redux Toolkit`, `NodeJS`, `Express`, `Jest`, `PostgreSQL`, `Docker`.
https://elbrusboot.camp/

Jun 2022 - Jun 2023

Contract and freelance engineer. (remote, and St Petersburg) Four clients over a year, lead front-end on two of them.

- A recommendation tool for **Moscow Post** that tells managers where to place new pick-up points, plotted on the interactive map I built.

- A marketplace and analytics platform for **the Ministry of Industries and Production**, including the dataset its recommendation model was trained on.
- A web interface for the robotic arm of a 3D printer at **Eburet** design studio, plus a CRM integrated into their business processes and an online store.
- Mobile layout, accessibility and cart work on the online store at **Moonk** design studio, to lift their online sales.

`React.js`, `Python`, `Redux Toolkit`, `Docker`, `JavaScript`, `PHP`, `SASS`, `Figma`.

Jun 2021 - May 2022

Database Developer at Sovcombank. (full-time, Kazan, hybrid) Built the data layer behind the bank's BI platform, on a high-load data warehouse. Modelled the data, wrote the queries the reports run on, and handled the integration that feeds them. `SQL`, `Data modelling`, `Data engineering`, `DWH`.

Sep 2019 - Aug 2020

Earlier: frontend developer at Barre One, a fitness studio in St Petersburg.
https://www.barre.one/

Education

Computer Science. 42 Ecole – a private institution of higher education (Kazan, Russia). *2020 - 2022*

Skills: `C`, `C++`, `Kubernetes`, `Unit Testing`, `TDD`, `Microservices`, `Technical Solution Design`

Diploma of Management. Russian Institute of Performing Arts (St Petersburg, Russia). *2016 - 2022*

My thesis designed a CRM for performing-arts companies, more than 90% of which used none at the time. Four large St Petersburg theatres wanted it, because it would improve how they stored their data and help them know their audience.
